

STEVE BENO H

Software Developer (Student)

+91 63856 36432 • stevebenoh@gmail.com • LinkedIn: www.linkedin.com/in/stevebenoh • Coimbatore – Tamil Nadu

Summary

An Electronics & Communications student in first year who connects hardware and software through building embedded/IoT prototypes using Arduino and ESP32, developing dynamic web apps using Next.js and Tailwind CSS, and creating interactive 3D environments using Unreal Engine 5. Recently completed an AI-based desktop assistant and an online portfolio site with full automation of AI-based lead contact process(es). Accepting internships or collaboration opportunities in embedded systems, web development & game development.

Experience

AI Virtual Personal Assistant — Personal Project | Python, NLP, File I/O

- Built an intelligent desktop assistant that uses large language models to parse natural-language instructions and automate daily developer and study workflows.
- Automated file management, application launching, and system processes — e.g., organizing 14+ academic documents into structured semester folders from a single command.
- Implemented semantic search over scientific documents and lecture notes, plus integrated shell utilities and git automation helpers.

Personal Portfolio Website — <https://portfolio-stevebenoh.vercel.app> | Next.js, Tailwind CSS, n8n

- Designed and deployed a fully responsive portfolio on Vercel showcasing projects, skills, and an interactive contact section.
- Integrated the contact form with an n8n automation workflow: webhook-triggered email notifications and AI-generated auto-replies powered by a Gemini agent.

Embedded Systems & IoT Prototypes | Arduino, ESP32, LTspice

- Built microcontroller-based, sensor-driven IoT prototypes and simulated analog and digital circuits using LTspice.

Skills

Languages: C/C++, Python, JavaScript, HTML/CSS

Web Development: Next.js, React, Tailwind CSS, Vercel, responsive UI design

Embedded & IoT: Arduino, ESP32, sensor interfacing, analog & digital circuit design, LTspice simulation

Game Development & 3D: Unreal Engine 5 (Blueprints, C++ gameplay), Autodesk Maya (modeling, rigging, animation)

Core ECE: Signals & systems, modulation, communication fundamentals, DSP basics with Python simulations

Tools & Automation: Git, n8n workflow automation, Python scripting and data analysis

Education

B.E. Electronics and Communication Engineering (ECE) — [Your College Name], Coimbatore, Tamil Nadu

2025 – 2029 (expected) | Currently in First Year

OPEN-SOURCE WORK

- GitHub — <https://github.com/stevebenoh-11>: repositories spanning Python automation, and web development projects.
- Portfolio website maintained as a public project on GitHub and deployed via Vercel with continuous deployment.
- Actively exploring contributions to open-source embedded systems and web tooling projects.
